

```
public class MobileDaoFactory {
    static String DAO = "";
    // static blocks gets executed as soon as class is loaded into JVM
    static {
        ResourceBundle res = ResourceBundle("database");
    }
    public static MobileDao getMobileDao() {
        return (MobileDao) Class.forName(DAO).newInstance();
        } catch(Exception ex) {
            ex.printStackTrace();
        }
        return null;
    }
}

// public static MobileDao getMobileDao() {
        return new MobileDaoMongoImpl();
}

// public static MobileDao getMobileDao() {
        // return new MobileDaoMongoImpl();
}
```
